Not illustrated. 1902 Excerpt: . with an intermediate pinion G, which is supported in bearings in the wall of the casing and in a lug projecting from the wall of the casing respectively. It will be seen that the gear C is provided with two pins, S and P, projecting laterally from its left hand face and the Fig. 2. gear A with sockets for these pins. When the shifting gears are in extreme position to the left these pins engage in the sockets and the two parts of the upper shaft are then locked together, causing the power to be transmitted directly. The countershaft then runs at the same speed as the engine, the same as for any other position of the shifting gears. When the shifting gears are moved to the right, to the position they are shown to occupy in the drawing, where gear C is in mesh with pinion D, the second speed is obtained. When the shifting gears are shifted farther in the same direction, after gear C and pinion D are out of mesh, gear E meshes first with pinion F, giving the lowest forward speed, and finally with the intermediate pinion G giving the reverse. The gear is controlled by means of a single lever and is inclosed in a closed casing of either cast iron or aluminum. It is made in two sizes, one for light and medium weight carriages and one for touring cars. The Webster Oasoline Cars. The Webster...
